

Fighting Food Waste with Portion Sizes

Camillo Lazarczyk and Simon Behr

Problem Statement

The US wastes nearly 40% of our food, creating 125-160 billion pounds of waste annually, leading to high emission rates, resource depletion, and food insecurity.

Background

- Sustainable Development Goal 12; Responsible Production and Consumption, Target 12.3; halving global per capita food waste

Background

- Sustainable Development Goal 12; Responsible Production and Consumption, Target 12.3; halving global per capita food waste
- US food production uses 15.7% of our energy budget
- 80% of the US's freshwater supply is used to produce food
- Food is an emission contributor throughout its lifecycle
 - Growing, harvesting, transportation, cooking, and general waste disposal all release emission

Background

- Sustainable Development Goal 12; Responsible Production and Consumption, Target 12.3; halving global per capita food waste
- US food production uses 15.7% of our energy budget
- 80% of the US's freshwater supply is used to produce food
- Food is an emission contributor throughout its lifecycle
 - Growing, harvesting, transportation, cooking, and general waste disposal all release emission
- Almost 20% of the food we produce is wasted on the buyer side
- 13.7 billion metric tons of carbon dioxide equivalents emitted through the food supply chain annually

Research Question

What would be the most effective waste **mitigation** and **management strategies** in the restaurant industry that Pittsburgh could utilize to produce a more sustainable environment?

- 1993 (20 years ago)
- 2013 (today)

SOURCE: NHLBI, Feb 2013.

92% of US restaurants serve oversized portions

Thinking about the types of restaurants you go out to eat in; what percent of your meal do you typically throw out?

At fast food restaurants

At full service restaurants

Other non-home dining locations

At buffets

Other:

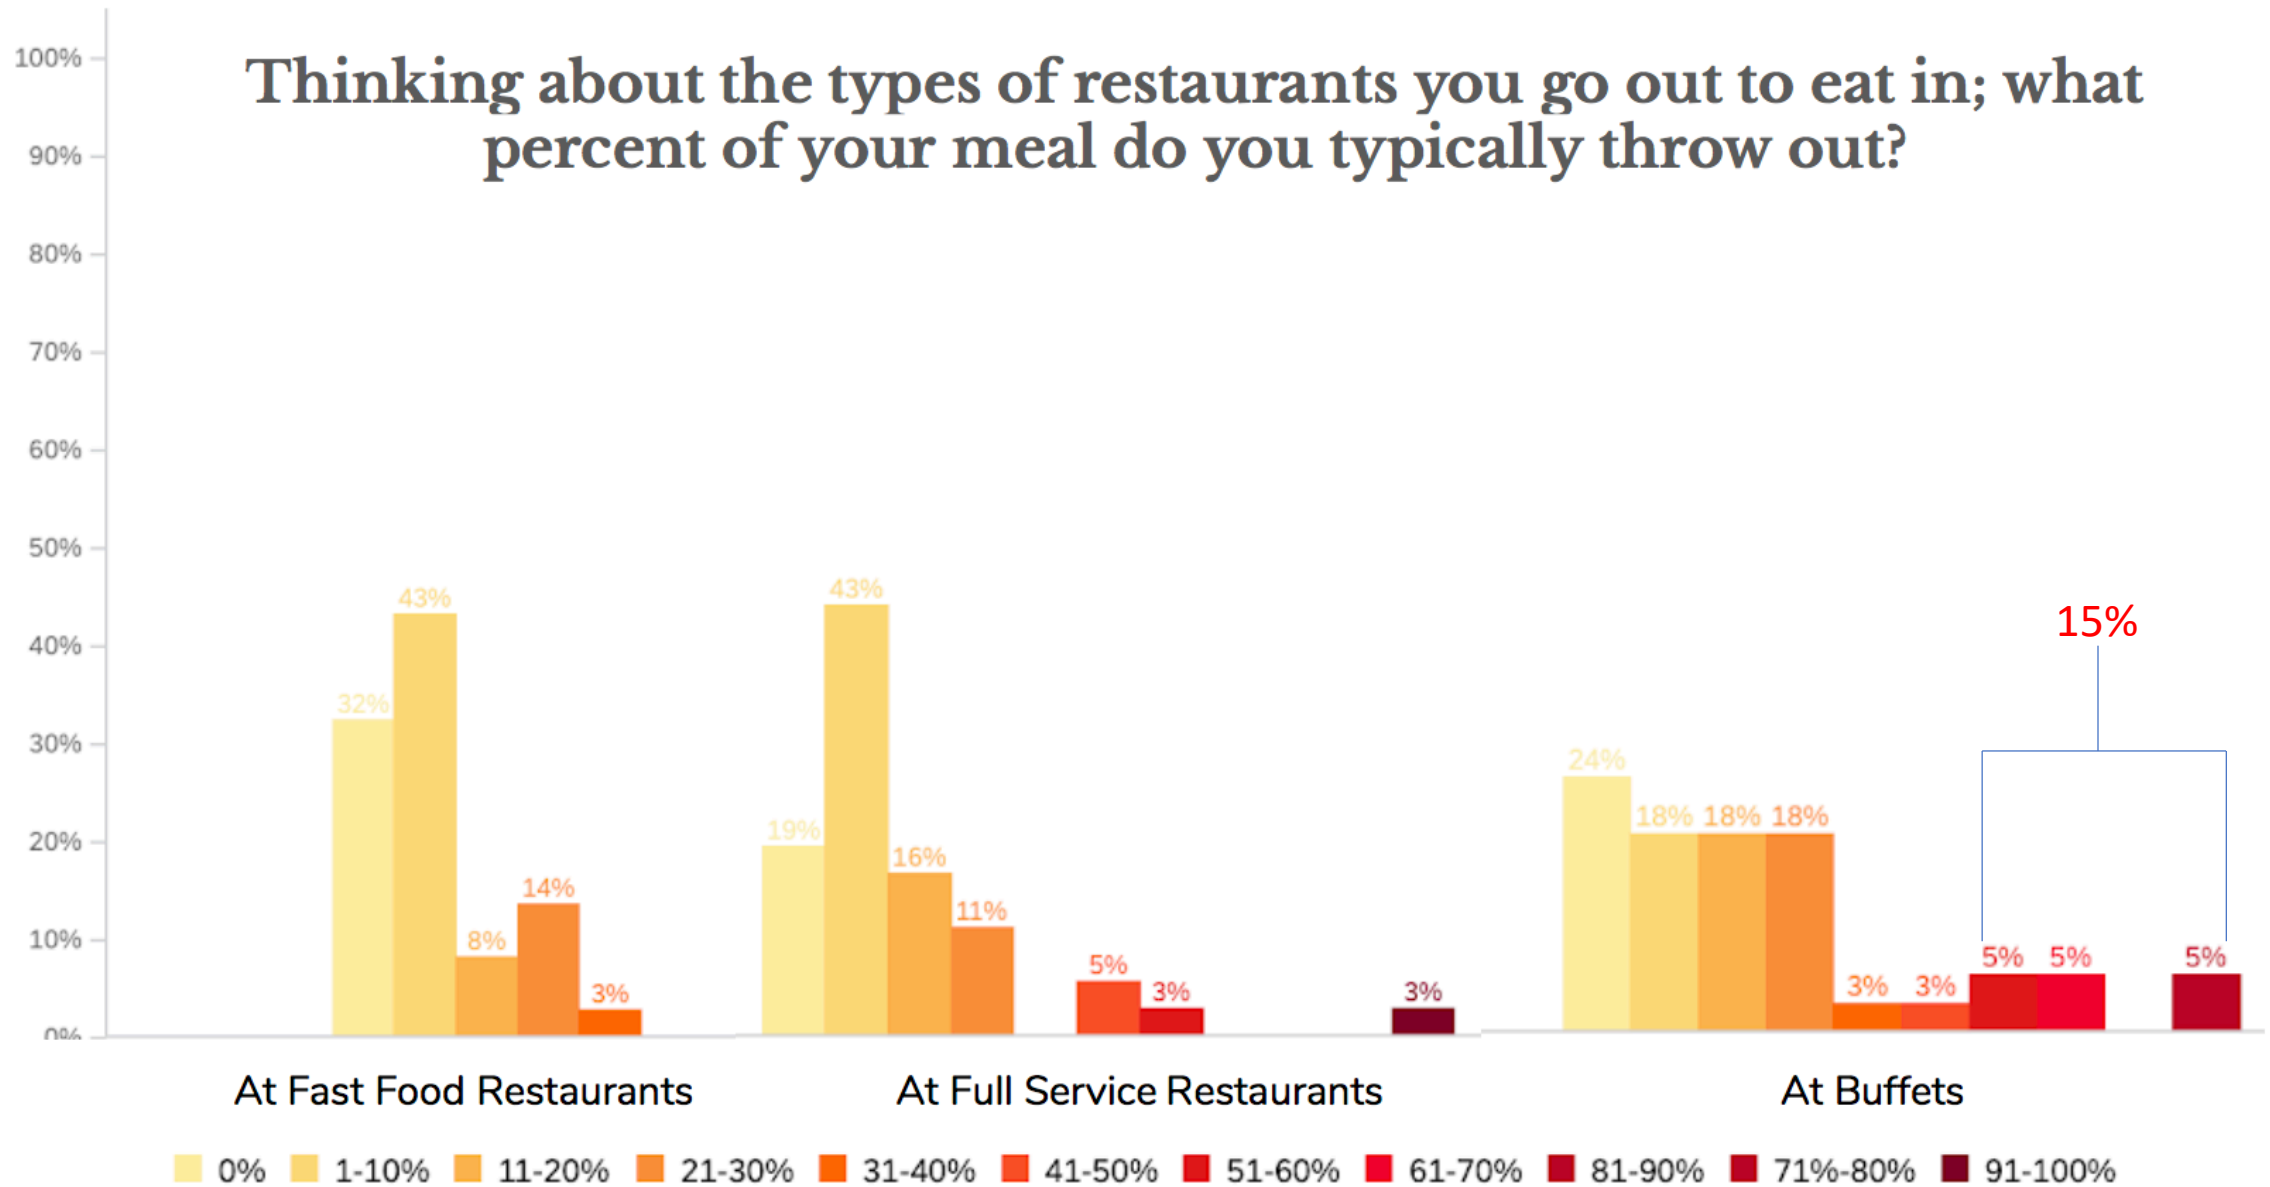

Thinking about the types of restaurants you go out to eat in; what percent of your meal do you typically throw out?

Thinking about the types of restaurants you go out to eat in; what percent of your meal do you typically throw out?

Thinking about the previous question on the percentage of food that you typically throw out; Please explain why you throw out the amount of food you identified above. If you don't throw any food out you may put NA

Most Common Responses

- **Portion sizes are too big and they can't eat it all**
- Leftovers brought home get thrown out
- Order too much
- Inconsistent appetites
- Food taste bad or bad quality

Portion Distortion

What you're served

1/2 lb. cheeseburger, French fries, 3/4 cup ketchup, tomato slice and lettuce.

What's one serving

1/4 lb. cheeseburger, half the French fries, 2 tablespoons ketchup, tomato slice and lettuce.

How often do you feel the portion size of your meal correlates to your appetite? (Numbers are percentages i.e. 0% = never, 50% = half the time, 100% = always)

How often do you feel the portion size of your meal correlates to your appetite?

How likely would you be to order smaller food portions?

	Very Likely	Somewhat Likely	Not likely	× N/A
For a lower cost	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
For the same cost	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
For a higher cost	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

How likely would you be to order smaller food portions?

Proposed Strategy

Helping consumers control the size of their meal by implementing smaller portion options at all restaurants.

Questions for Further Research

Do these trends around food waste continue beyond the Bucknell community?

How could we enable full-service restaurants implement portion options?
